market commentary

Fixed income markets posted mixed returns in December. UK Gilts too rallied after prime minister Theresa May delayed the vote on Brexit deal amid lack of parliamentary support stoking concerns that she is stepping up preparations for a no Brexit deal. Meanwhile, the European economy witnessed a disappointing end to 2018, as business growth registered its weakest pace in over two years in December. The European Central Bank also lowered its GDP outlook for 2019 to 1.6% from the previous estimate of 1.9%. German bund yields fell slightly over the month. On the policy front, the final central bank meetings of 2018 unfolded as expected. Corporate bond spreads widened amid concerns over a slowdown in global growth, China-US trade tensions and weak oil prices. Emerging market bonds posted positive returns, with hard currency sovereign bonds outperforming corporate bonds.

risk rating

Very Low Low Low/Medium Medium Medium/High High Very High

All investments carry a level of risk. You need to decide how much of each type of risk you're prepared to take. The table below gives an overview of some of the risks associated with this fund.

risk type	description of risk	level of risk for this fund
Capital Risk	This is the risk that the value of your investments will fall. The younger you are, the less worried you might be about capital risk, because your investments have time to recover their value before you retire.	Med
Inflation Risk	This is the risk that the value of your investments will grow more slowly than prices rise. Inflation can be a problem for pension savings invested in cash funds particularly if the interest you're earning is less than the rate of inflation.	Med
Pension Conversion Risk	The price of an annuity changes on a regular basis. This means that the amount of income you can secure with the same amount of money will change. Pension conversion risk is the risk that the amount of income you can buy drops before you retire, because your money is invested differently to annuity funds. That's why putting more of your DC pension pot into bonds to try to match annuity prices as you get closer to retirement age can help protect against this risk.	Low

About the factsheet

It is important to remember that the price of units can go down as well as up. There's no guarantee that you'll get back the amount that goes into your DC pension pot. Changes in rates of currency exchange, particularly where overseas securities are held, could also affect the value of your investment.

All funds are provided through FIL Life Insurance Ltd and may invest in securities issued by or hold deposits with HSBC Holdings plc and associated companies.

The Trustee can change the underlying managers or funds at any time without member consent or prior notification.

Valuation time: Business days at 5:00pm (UK time)

Dealing Process: The cut off time for switch instructions is 2:00pm each business day.
