market commentary

UK equities rallied in the first quarter and started the year on a positive note, following a sharp sell-off in the previous quarter. This was mainly driven by the accommodative monetary policy stance by central banks across developed markets, particularly the US Federal Reserve, which stated that it would not raise interest rates further this year given a modest outlook for the economy. Hopes of progress in US-China trade talks also supported the market. These factors offset concerns around weakening global growth and the negative impact of Brexit related uncertainty. On the policy front, the Bank of England (BoE) kept interest rates steady, as all nine members of the bank's Monetary Policy Committee (MPC) voted to keep rates at 0.75%. At a sector level, technology and materials stocks were the major gainers, while telecommunications lagged the broader market.

risk rating

Very Low Low Low/Medium Medium Medium/High High Very High

All investments carry a level of risk. You need to decide how much of each type of risk you're prepared to take. The table below gives an overview of some of the risks associated with this fund.

risk type	description of risk	level of risk for this fund
Capital Risk	This is the risk that the value of your investments will fall. The younger you are, the less worried you might be about capital risk, because your investments have time to recover their value before your retire.	High
Inflation Risk	This is the risk that the value of your investments will grow more slowly than prices rise. Inflation can be a problem for pension savings invested in cash funds particularly if the interest you're earning is less than the rate of inflation.	Med
Pension Conversion Risk	The price of an annuity changes on a regular basis. This means that the amount of income you can secure with the same amount of money will change. Pension conversion risk is the risk that the amount of income you can buy drops before you retire, because your money is invested differently to annuity funds. That's why putting more of your DC pension pot into bonds to try to match annuity prices as you get closer to retirement age can help protect against this risk.	High

About the factsheet

It is important to remember that the price of units can go down as well as up. There's no guarantee that you'll get back the amount that goes into your DC pension pot. Changes in rates of currency exchange, particularly where overseas securities are held, could also affect the value of your investment.

All funds are provided through FIL Life Insurance Ltd and may invest in securities issued by or hold deposits with HSBC Holdings plc and associated companies.

The Trustee can change the underlying managers or funds at any time without member consent or prior notification.

Valuation time: Business days at 5:00pm (UK time)

Dealing Process: The cut off time for switch instructions is 2:00pm each business day.
