## market commentary

Emerging markets rose over the quarter as robust economic data from China and the US boosted investors' appetite for riskier assets. Tax cuts in the US and the Federal Reserve's (Fed) decision to raise interest rates was perceived as an indication of the Fed's confidence in the US economy. However, markets were negatively impacted by geopolitical tensions after North Korea conducted an intercontinental ballistic missile test. Chinese stocks advanced following the announcement of easing foreign ownership limits on banks and fund managers. During the quarter, the National Congress of Communist Party of China outlined the country's long-term development roadmap. Elsewhere, South African equities rose following the victory of business-friendly Cyril Ramaphosa as the leader of the African National Congress party. Against this backdrop, stocks in the health care, consumer discretionary and materials sectors advanced.

## risk rating

Very Low Low Low/Medium Medium Medium/High High Very High

All investments carry a level of risk. You need to decide how much of each type of risk you're prepared to take. The table below gives an overview of some of the risks associated with this fund.

risk type	description of risk	level of risk for this fund
<b>Capital Risk</b>	This is the risk that the value of your investments will fall. The younger you are, the less worried you might be about capital risk, because your investments have time to recover their value before you retire.	Very High
<b>Inflation Risk</b>	This is the risk that the value of your investments will grow more slowly than prices rise. Inflation can be a problem for pension savings invested in cash funds particularly if the interest you're earning is less than the rate of inflation.	Med High
<b>Pension Conversion Risk</b>	The price of an annuity changes on a regular basis. This means that the amount of income you can secure with the same amount of money will change. Pension conversion risk is the risk that the amount of income you can buy drops before you retire, because your money is invested differently to annuity funds. That's why putting more of your DC pension pot into bonds to try to match annuity prices as you get closer to retirement age can help protect against this risk.	High

## About the factsheet

It is important to remember that the price of units can go down as well as up. There's no guarantee that you'll get back the amount that goes into your DC pension pot. Changes in rates of currency exchange, particularly where overseas securities are held, could also affect the value of your investment.

All funds are provided through FIL Life Insurance Ltd and may invest in securities issued by or hold deposits with HSBC Holdings plc and associated companies.

The Trustee can change the underlying managers or funds at any time without member consent or prior notification.

**Valuation time:** Business days at 5:00pm (UK time)

**Dealing Process:** The cut off time for switch instructions is 2:00pm each business day.
