## market commentary

Global equities generated positive returns in the third quarter. While political risks have abated in Europe, growth in the UK has been impacted by uncertainty related to negotiations over its exit from the European Union (EU). Meanwhile, geopolitical tensions centred around North Korea led to a risk-off stance in markets in September. The US Federal Reserve signalled the likelihood of one more interest rate hike in December and said that it would start to gradually tighten its balance sheet starting October. Meanwhile, the European Central Bank has emphasised the gradual withdrawal of policy support. Against this backdrop, emerging markets and Europe ex UK equities outperformed, while Pacific ex Japan lagged. At the sector level, energy and materials were the strongest performers, supported by increased demand for industrial commodities, while defensive sectors such as consumer staples and health care came under pressure.

## risk rating

Very Low Low Low/Medium Medium Medium/High High Very High

All investments carry a level of risk. You need to decide how much of each type of risk you're prepared to take. The table below gives an overview of some of the risks associated with this fund.

risk type	description of risk	level of risk for this fund
<b>Capital Risk</b>	This is the risk that the value of your investments will fall. The younger you are, the less worried you might be about capital risk, because your investments have time to recover their value before you retire.	High
<b>Inflation Risk</b>	This is the risk that the value of your investments will grow more slowly than prices rise. Inflation can be a problem for pension savings invested in cash funds particularly if the interest you're earning is less than the rate of inflation.	Med
<b>Pension Conversion Risk</b>	The price of an annuity changes on a regular basis. This means that the amount of income you can secure with the same amount of money will change. Pension conversion risk is the risk that the amount of income you can buy drops before you retire, because your money is invested differently to annuity funds. That's why putting more of your DC pension pot into bonds to try to match annuity prices as you get closer to retirement age can help protect against this risk.	High

## About the factsheet

It is important to remember that the price of units can go down as well as up. There's no guarantee that you'll get back the amount that goes into your DC pension pot. Changes in rates of currency exchange, particularly where overseas securities are held, could also affect the value of your investment.

All funds are provided through FIL Life Insurance Ltd and may invest in securities issued by or hold deposits with HSBC Holdings plc and associated companies.

**Valuation time:** Business days at 5:00pm (UK time)

**Dealing Process:** The cut off time for switch instructions is 2:00pm each business day.
