

the DC funds

Property – active
as at 30 September 2018

fund objective

To provide long-term capital growth in excess of the UK price inflation by investing in commercial property, directly (mainly) in the UK and/or indirectly via property companies listed around the world. The fund aims to outperform the benchmark over the long-term.

market commentary

Global property markets ended the third quarter of 2018 in negative territory in US dollar terms, but generated positive returns in sterling terms. Growth in the house building sector has also slowed in the last six months as investors remain in a cautious mood. Subdued economic activity, pressure on household budgets and Brexit-related uncertainties weighed on overall sentiment. Nonetheless, the UK property market remains an attractive investment opportunity for institutional and foreign buyers, amid uncertainties surrounding foreign and economic policies in the US and China. Elsewhere, the US housing market was positive as supportive economic fundamentals, a strong labour market and tax incentive programmes continued to drive demand for residential property. In the eurozone, house price recovery continues to be supported by an accommodative monetary policy and accelerating economic activity.

risk rating

Very Low Low Low/Medium Medium Medium/High High Very High

All investments carry a level of risk. You need to decide how much of each type of risk you're prepared to take. The table below gives an overview of some of the risks associated with this fund.

risk type	description of risk	level of risk for this fund
Capital Risk	This is the risk that the value of your investments will fall. The younger you are, the less worried you might be about capital risk, because your investments have time to recover their value before you retire.	Med High
Inflation Risk	This is the risk that the value of your investments will grow more slowly than prices rise. Inflation can be a problem for pension savings invested in cash funds particularly if the interest you're earning is less than the rate of inflation.	Med
Pension Conversion Risk	The price of an annuity changes on a regular basis. This means that the amount of income you can secure with the same amount of money will change. Pension conversion risk is the risk that the amount of income you can buy drops before you retire, because your money is invested differently to annuity funds. That's why putting more of your DC pension pot into bonds to try to match annuity prices as you get closer to retirement age can help protect against this risk.	High

About the factsheet

It is important to remember that the price of units can go down as well as up. There's no guarantee that you'll get back the amount that goes into your DC pension pot. Changes in rates of currency exchange, particularly where overseas securities are held, could also affect the value of your investment.

All funds are provided through FIL Life Insurance Ltd and may invest in securities issued by or hold deposits with HSBC Holdings plc and associated companies.

The Trustee can change the underlying managers or funds at any time without member consent or prior notification.

Valuation time: Business days at 5:00pm (UK time)

Dealing Process: The cut off time for switch instructions is 2:00pm each business day.
