## market commentary

Emerging markets delivered absolute returns in the third quarter. Risk-on sentiment increased on news of vaccine developments and signs of an economic recovery in China, suggesting that the impact of the COVID-19 pandemic has moderated. In emerging Asia, Chinese equities were positive after the country reported better-than-expected second quarter GDP numbers and a slew of new listings during the quarter. Indian equities continued their upward trend as more businesses resumed operations after a relaxation in lockdown measures. Latin American securities posted negative returns and underperformed the wider emerging markets index. The Brazilian market traded lower as its economy experienced the sharpest quarterly decline on record due to lockdown measures. Oil prices were volatile during the quarter. In September, new concerns emerged as Saudi Arabia slashed its official selling price to Asia and the US, leading to a sharp decline in prices.

## risk rating

Very Low Low Low/Medium Medium Medium/High High Very High

All investments carry a level of risk. You need to decide how much of each type of risk you're prepared to take. The table below gives an overview of some of the risks associated with this fund.

risk type	description of risk	level of risk for this fund
<b>Capital Risk</b>	This is the risk that the value of your investments will fall. The younger you are, the less worried you might be about capital risk, because your investments have time to recover their value before your retire.	Very High
<b>Inflation Risk</b>	This is the risk that the value of your investments will grow more slowly than prices rise. Inflation can be a problem for pension savings invested in cash funds particularly if the interest you're earning is less than the rate of inflation.	Med High
<b>Pension Conversion Risk</b>	The price of an annuity changes on a regular basis. This means that the amount of income you can secure with the same amount of money will change. Pension conversion risk is the risk that the amount of income you can buy drops before you retire, because your money is invested differently to annuity funds. That's why putting more of your DC pension pot into bonds to try to match annuity prices as you get closer to retirement age can help protect against this risk.	High

## About the factsheet

It is important to remember that the price of units can go down as well as up. There's no guarantee that you'll get back the amount that goes into your DC pension pot. Changes in rates of currency exchange, particularly where overseas securities are held, could also affect the value of your investment. Although the funds can typically be bought and sold on a daily basis, if an exceptional amount of withdrawals are requested, the fund manager may need to delay when you can access your holdings. All funds are provided through FIL Life Insurance Ltd and may invest in securities issued by or hold deposits with HSBC Holdings plc and associated companies. The Trustee can change the underlying managers or funds at any time without member consent or prior notification.

**Valuation time:** Business days at 5:00pm (UK time)

**Dealing Process:** The cut off time for switch instructions is 2:00pm each business day.
