

The DC Funds

Global Bonds - active as at 30 September 2022

Fund objective

To provide long-term capital growth in excess of UK price inflation. The fund aims to have less capital risk than an equities based fund.

Current Benchmark:
SONIA +2% (per annum over a rolling 5 year basis)

Volatility (% per annum):

	3 Years	5 Years
Fund:	4.6	3.8
Benchmark:	0.1	0.1

Annualised volatility: a measure of how variable returns for a fund or comparative market index have been around their historical average (also known as "standard deviation"). Two funds may produce the same return over a period. The fund whose monthly returns have varied less have a lower annualised volatility and may be considered to have achieved its returns with less risk. The calculation is the standard deviation of monthly returns presented as an annualised number. Volatility for funds and indices are calculated independently of each other.

Fund Performance

Note

Total fund performance is made up of a composite of all the current and historic underlying investment manager(s) fund arrangement(s). As such, the longer-term performance shown may not solely reflect that of the current investment manager fund arrangement(s) for this fund. Past performance is not a guide to future performance. The figures are shown in Sterling and have been calculated using actual returns since the introduction of the current DC fund range. Source: FIL Life Insurance Ltd. Single priced, gross income reinvested and net of fees. Indicative prices have been used if a portfolio valuation fell on a non-trading day.

Market Commentary

Fixed income markets posted negative returns. Investors remained concerned over soaring inflation, which led to front loading of interest rate hikes by global central banks and worries around a slowdown in global economic activity. Hopes of a dovish pivot by central banks in July vanished after the US Federal Reserve (Fed), European Central Bank (ECB) and Bank of England (BoE) stuck to a hawkish stance despite slashing economic growth forecasts. September saw historic volatility in the rates market, with UK government bonds (Gilt) witnessing dramatic price action at the long end of the curve. Investors pushed Gilt yields sharply higher after the new government unveiled a mini budget that announced as-yet-unfunded fiscal spending. This, when the BoE is raising interest rates aggressively to combat multi-year high inflation, taking its base rate to 2.25% from 1.75%. In the US, the Fed increased interest rates thrice in a row by 0.75 percentage points, while the ECB raised rates by 0.75 percentage points. On the credit front, higher sovereign yields and spread widening in the last two weeks of September led to negative total returns for both high yield and investment grade bonds, despite remaining resilient over most of the quarter. Risk rating

Very low Low Low/medium Medium Medium/high High Very high

All investments carry a level of risk. You need to decide how much of each type of risk you're prepared to take. The table below gives an overview of some of the risks associated with this fund

Risk type	Description of risk	Level of risk for this fund
Capital Risk	This is the risk that the value of your investments will fall. Investors in higher capital risk funds should expect to see above average growth over the long term, but might see big falls in value in the short term. The younger you are, the less worried you might be about capital risk, because your investments have time to recover their value before you retire. Higher capital risk funds may be less suitable if you are close to retirement and want more certainty.	M
Inflation Risk	This is the risk that the value of your investments will grow more slowly than prices rise. Inflation can be a problem for pension savings invested in cash or bond funds particularly if the interest you're earning is less than the rate of inflation and you are some way from retirement.	M
Pension Conversion Risk	The price of an annuity changes on a regular basis. This means that the amount of income you can secure with the same amount of money will change. Pension conversion risk is the risk that the amount of income you can buy drops before you retire, because your money is invested differently to annuity funds. That's why, if you wish to buy an annuity to provide a regular income through retirement, putting more of your DC pension pot into bonds to try to match annuity prices as you get closer to retirement age can help protect against this risk. If you wish to continue investing your pension savings during retirement and access drawdown then this is less of a concern.	M

About the factsheet

It is important to remember that the price of units can go down as well as up. There's no guarantee that you'll get back the amount that goes into your DC pension pot. Changes in rates of currency exchange, particularly where overseas securities are held, could also affect the value of your investment. Although the funds can typically be bought and sold on a daily basis, fund managers may need to delay when you can access your holdings in a fund(s) due to exceptional market circumstances. All funds are provided through FIL Life Insurance Ltd and may invest in securities issued by or hold deposits with HSBC Holdings plc and associated companies. The Trustee can change the underlying managers or funds within this fund, or decide to withdraw or replace the fund at any time, without member consent or prior notification. This factsheet should be read alongside the investment guide.

Making fund choices is an important decision that could have a significant effect on your benefits. This factsheet has been produced to provide you with fund information and is not designed to provide advice or a recommendation on the suitability of an investment for your personal financial circumstances. The Trustee cannot give you financial advice about your fund choices. Consider taking independent financial advice before making any investment decisions.

Valuation time: Business days at 5:00pm (UK time)

Dealing Process: The cut off time for switch instructions is 2:00pm each business day.
