

fund objective

To provide long-term capital growth in excess of UK price inflation. The fund aims to have less capital risk than an equities based fund.

fund facts

Launch date:
2 March 2015

Fund size:
£66.22m

Price per share:

market commentary

Global bonds posted mixed returns over the quarter, with government bonds outperforming corporate bonds. Developed market central bank policies diverged, with the US Federal Reserve's (Fed) tightening monetary policy stance picking up pace versus the eurozone and the UK. The period witnessed political uncertainty in Italy and escalating trade war rhetoric, which stoked demand for safe haven assets. German bund yields slid and ten-year UK government bond (Gilt) yields fell to the lowest level since the start of the year, before closing slightly higher as volatility normalised. Meanwhile, US Treasury yields rose amid signs that inflation could accelerate further. Credit spreads widened, with European corporates underperforming both the US and the UK. Emerging markets remained under pressure given the strength of the US dollar.

risk rating

Very Low Low Low/Medium Medium Medium/High High Very High

All investments carry a level of risk. You need to decide how much of each type of risk you're prepared to take. The table below gives an overview of some of the risks associated with this fund.

risk type	description of risk	level of risk for this fund
Capital Risk	This is the risk that the value of your investments will fall. The younger you are, the less worried you might be about capital risk, because your investments have time to recover their value before your retire.	Med
Inflation Risk	This is the risk that the value of your investments will grow more slowly than prices rise. Inflation can be a problem for pension savings invested in cash funds particularly if the interest you're earning is less than the rate of inflation.	Med
Pension Conversion Risk	The price of an annuity changes on a regular basis. This means that the amount of income you can secure with the same amount of money will change. Pension conversion risk is the risk that the amount of income you can buy drops before you retire, because your money is invested differently to annuity funds. That's why putting more of your DC pension pot into bonds to try to match annuity prices as you get closer to retirement age can help protect against this risk.	Med

About the factsheet

It is important to remember that the price of units can go down as well as up. There's no guarantee that you'll get back the amount that goes into your DC pension pot. Changes in rates of currency exchange, particularly where overseas securities are held, could also affect the value of your investment.

All funds are provided through FIL Life Insurance Ltd and may invest in securities issued by or hold deposits with HSBC Holdings plc and associated companies.

The Trustee can change the underlying managers or funds at any time without member consent or prior notification.

Valuation time: Business days at 5:00pm (UK time)

Dealing Process: The cut off time for switch instructions is 2:00pm each business day.
