

# The DC Funds

Index-Linked Annuity Tracker - passive as at 31 March 2023

## Fund objective

To mitigate against pension conversion risk (for indexed annuities).

## Fund description

The investment approach is designed for members looking to buy an inflation-linked annuity (a regular income for life) at retirement. The Fund invests in long-term inflation-linked bonds issued by the UK Government and sterling corporate bonds, aiming to replicate investments held an annuity provider offering a typical inflation-linked annuity product and therefore aims to protect purchasing power in terms of annuity rates. The investment manager has discretion over which bonds to hold and when to buy/sell them. ESG factors are considered within the investment process where relevant.

### Fund Facts

**Launch Date:**  
23/2/2007

**Fund size:**  
£16.68m

**Price Per Share:**  
198.7p

**Base Currency:**  
GBP

**Does this fund form part of an HSBC default strategy?**  
No

**Charges:**  
Inv Mgmt Charges: 0.00%  
Additional Charges: 0.00%

HSBC pays the investment management charges – not you. However, there may be costs within some of the funds and these will be reflected in the unit price. These nominal costs are variable and are likely to be between nil and 0.2% a year.

**Current Underlying Fund(s):**  
100% Legal & General Future World Inflation Linked Annuity Aware Fund

**Current Comparator:**  
No current suitable comparator

Volatility (% per annum):	3 Years	5 Years
Fund:	15.4	13.3

Annualised volatility: a measure of how variable returns for a fund or comparative market index have been around their historical average (also known as "standard deviation"). Two funds may produce the same return over a period. The fund whose monthly returns have varied less have a lower annualised volatility and may be considered to have achieved its returns with less risk. The calculation is the standard deviation of monthly returns presented as an annualised number. Volatility for funds and indices are calculated independently of each other.

### Fund Performance

### Note

The Inflation Linked Annuity Tracker Fund aims to mitigate pension conversion risk for indexed annuities. The fund does this by investing in government and corporate bonds, as these are the assets generally held by annuity providers. The fund now invests in government and corporate bonds directly (rather than investing in underlying passive funds) with the aim of the fund manager having more control over which bonds to hold. However, it means the previous benchmark is no longer suitable. There is currently no suitable performance comparator available for the fund. The Trustees are reviewing the options available in order to provide a suitable performance comparator in factsheets.

Past performance is not a guide to future performance. The figures are shown in Sterling and have been calculated using actual returns since the introduction of the current DC fund range. ### Market Commentary

Fixed income markets registered broad-based gains. The period started on a positive note, as investors were hopeful that monetary policy tightening may be coming to an end. China's economic re-opening and a fall in natural gas prices in Europe led to expectations of an improvement in global growth. Markets witnessed substantial volatility in March after the collapse of Silicon Valley Bank, which led to fears over broader contagion across the banking system. Credit Suisse also dominated headlines as it came under investor scrutiny and was finally acquired by UBS with guarantees from the Swiss government. The significant market turmoil in March saw investors recalibrating future rate hikes, thus leading to the strong performance of global government bonds. On the economic front, the annual inflation rate in the UK remained stubbornly high and unexpectedly rose to 10.4% in February, primarily due to price increases in food and non-alcoholic beverages, breaking three consecutive monthly declines. ## For members of the HSBC Bank (UK) Pension Scheme

### Risk rating

 Very low  Low  Low/medium  Medium  Medium/high  High  Very high

All investments carry a level of risk. You need to decide how much of each type of risk you're prepared to take. The table below gives an overview of some of the risks associated with this fund

Risk type	Description of risk	Level of risk for this fund
Capital Risk	This is the risk that the value of your investments will fall. Investors in higher capital risk funds should expect to see above average growth over the long term, but might see big falls in value in the short term. The younger you are, the less worried you might be about capital risk, because your investments have time to recover their value before you retire. Higher capital risk funds may be less suitable if you are close to retirement and want more certainty.	
Inflation Risk	This is the risk that the value of your investments will grow more slowly than prices rise. Inflation can be a problem for pension savings invested in cash or bond funds particularly if the interest you're earning is less than the rate of inflation and you are some way from retirement.	
Pension Conversion Risk	The price of an annuity changes on a regular basis. This means that the amount of income you can secure with the same amount of money will change. Pension conversion risk is the risk that the amount of income you can buy drops before you retire, because your money is invested differently to annuity funds. That's why, if you wish to buy an annuity to provide a regular income through retirement, putting more of your DC pension pot into bonds to try to match annuity prices as you get closer to retirement age can help protect against this risk. If you wish to continue investing your pension savings during retirement and access drawdown then this is less of a concern.	

### About the factsheet

It is important to remember that the price of units can go down as well as up. There's no guarantee that you'll get back the amount that goes into your DC pension pot. Changes in rates of currency exchange, particularly where overseas securities are held, could also affect the value of your investment. Although the funds can typically be bought and sold on a daily basis, fund managers may need to delay when you can access your holdings in a fund(s) due to exceptional market circumstances. All funds are provided through FIL Life Insurance Ltd and may invest in securities issued by or hold deposits with HSBC Holdings plc and associated companies. The Trustee can change the underlying managers or funds within this fund, or decide to withdraw or replace the fund at any time, without member consent or prior notification. This factsheet should be read alongside the investment guide.

Making fund choices is an important decision that could have a significant effect on your benefits. This factsheet has been produced to provide you with fund information and is not designed to provide advice or a recommendation on the suitability of an investment for your personal financial circumstances. The Trustee cannot give you financial advice about your fund choices. Consider taking independent financial advice before making any investment decisions.

**Valuation time:** Business days at 5:00pm (UK time)

**Dealing Process:** The cut off time for switch instructions is 2:00pm each business day.
